ABOUT

AI Engineer and Backend Developer with hands-on experience building production AI systems — including LLM integration, RAG pipelines, LangGraph-based automation, and backend APIs using Python and FastAPI. Currently working as an AI Engineer at Saturn7 Solutions, building real-world AI automation systems. I build practical AI tools that automate workflows, generate insights, and solve real problems for real users.

EDUCATION

Bachelor in Artificial Intelligence, Pak Austria Fachhochschule (PAF-IAST) Haripur, KPK | 3rd Year

SKILLS

Languages & Frameworks: Python, FastAPI, Django, SQLAlchemy, REST APIs, SQL Databases

AI/ML: Machine Learning, NLP, LangChain, LangGraph, RAG Systems, Prompt Engineering, Hugging Face, Claude/Anthropic API, MCP, LLM Integration

Tools: Docker, Git & GitHub, Vector Databases

PROFESSIONAL EXPERIENCE

AI Engineer (Contract, Flexible) | Saturn7 Solutions Taxila, Pakistan (Onsite) | July 2026 – Present

- Designed and deployed a production RAG system using LangChain and ChromaDB (top-k=3 retrieval) for a small business website, handling customer queries, complaints, and policy/terms questions automatically
- Built a booking system integrated into the same client website
- Built and deployed a Facebook automation bot using Selenium, capable of auto-posting content and managing account activity, hosted on a VPS

Repos: <https://github.com/jwd-jr/lollypop-lane-chatbot> <https://github.com/jwd-jr/lollypop-lane-booking>

Backend Developer Intern | Hoop Interactive Wyoming, USA (Remote) | Mar 2026 – June 2026

- Built REST APIs using FastAPI for a full-stack Tax Filing System, handling tax record submission, data storage, and transaction tracking
- Designed a normalized relational database schema based on ERD and class diagram planning
- Containerized the backend using Docker and set up scheduled cron jobs to automate recurring tasks
- Collaborated cross-functionally on testing, debugging, and feature development

PROJECTS

Job Search & Application Assistant | LangGraph • SQLite • Tavily API <https://github.com/jwd-jr/langgraph-job-assistant>

- Built an agentic job search system using LangGraph that takes a resume and location, searches for matching roles, and automatically broadens the search query if fewer than 5 relevant results
- Designed modular subgraphs for resume understanding, job search, and scoring/tracking, with structured state management across the pipeline
- Built a working frontend where users review matched jobs, apply directly, and log outcomes (accepted/rejected) with persistent tracking via SQLite
- Built a feedback loop that analyzes rejection patterns over time and suggests specific improvements to the user's resume or approach for future applications

Shilajit Store — E-commerce Website | Django • Python • SQLite/ORM <https://github.com/jwd-jr/Startup>

- Built a full e-commerce website from scratch using Django, including product catalog, batch/lab-test verification, and Cash on Delivery ordering
- Designed the database schema with Product, Batch, and Order models for customer trust and traceability
- Built a custom Django admin panel for managing products, batches, and order status
- Implemented a lightweight RAG-based Q&A system for product, shipping, and policy questions
- (Deployment pending — not yet live)

<https://github.com/jwd-jr/>

YouTube Comment Analyzer — Live Extension | FastAPI • Scikit-learn • K-Means

- Built and deployed a full-stack ML app: backend live on Railway, frontend as a working Chrome Extension
- Sentiment analysis on up to 1,000 YouTube comments using 5 trained ML models; best model served via FastAPI
- Opinion clustering with K-Means + TF-IDF with percentage breakdown, shown as an interactive chart
